

Yogita Mittal

Full Stack Engineer (JavaScript / Node.js / Python / ML Systems)

India • Open to Remote / Contract
yogitamittal.tech@gmail.com — +91 8360492810
GitHub — ML Projects — ML (Scikit)
Portfolio

Summary

Full Stack Engineer with 13+ years of experience building and scaling production web applications, combined with hands-on experience in machine learning workflows using TensorFlow and Scikit-learn.

Strong background in shipping end-to-end features across frontend, backend, and production systems. Experienced in performance optimization, system reliability, and real-world debugging. Comfortable working across JavaScript (Node.js) and Python-based pipelines, with growing focus on AI-driven systems and data workflows.

Thrives in high-ownership, fast-moving environments and enjoys working on real-world systems that integrate software, data, and user-facing applications.

Core Skills

Languages: JavaScript (Node.js), Python, PHP

Frontend: React, Next.js, HTML5, CSS3

Backend: Node.js, Express, REST APIs

ML/AI: TensorFlow, Scikit-learn, Data Preprocessing, Model Evaluation

Systems: Linux (basic), API integrations, Distributed workflows

Databases: MySQL, PostgreSQL

Performance: Optimization, Debugging, Load Time Reduction

Tools: Git, Docker (basic), CI/CD

Workflow: Agile, Cross-functional Collaboration, Ownership

Professional Experience

Marketing Web Developer – Measured

Oct 2023 – Nov 2024

- Built and shipped full stack features for production web applications, integrating frontend UI with backend APIs.
- Reduced page load time from 3.5s to 0.7s through performance optimization and efficient data handling.
- Improved SEO score from 78% to 98% and enhanced accessibility using semantic HTML and structured data.
- Developed reusable component systems and modular frontend architecture.
- Collaborated with product, analytics, and engineering teams to deliver user-focused solutions.

Software Developer – Kinerk Direct Marketing Solutions

Jan 2012 – Sept 2022

- Developed and maintained large-scale production systems using PHP (Smarty) and MySQL across multiple high-traffic websites.
- Improved performance and reliability of user-facing systems under high load conditions.
- Led accessibility improvements across 19 production websites, achieving consistent Lighthouse scores of 95+.
- Integrated APIs for payment, shipping, and analytics systems.
- Diagnosed and resolved production issues impacting critical workflows such as checkout and transactions.
- Worked across frontend and backend layers to ensure seamless data flow and system stability.

Machine Learning Projects

Deep Learning Practice (TensorFlow)

GitHub Repository

- Implemented image classification using CIFAR datasets with neural networks.
- Built NLP models for sentiment analysis and review classification using TensorFlow.
- Performed data preprocessing, feature engineering, model training, and evaluation.
- Worked with Jupyter/Colab notebooks for experimentation and iteration.

Traditional ML – Classification Models

GitHub Repository

- Built classification models using Scikit-learn for structured datasets.
- Implemented end-to-end ML workflow including EDA, feature selection, and evaluation.
- Explored model performance tuning and validation techniques.

Projects

Red Rock Taxes – Migration & Optimization

- Led full website migration including DNS configuration and SEO-safe 301 redirects.
- Ensured zero downtime and preserved search rankings post-migration.

Ideaboard – API-driven System

- Built backend services using Node.js and Express with modular architecture.

Engineering Impact

- Strong ownership mindset with experience delivering end-to-end production systems.
- Comfortable working across unfamiliar stacks and rapidly learning new technologies.
- Experienced in collaborating with cross-functional teams including product and data-focused roles.

Education

Bachelor's Degree – Computer Science / Engineering
