Summary

Senior Software Engineer with 13+ years of experience building, debugging, and scaling production web applications across WordPress, PHP, JavaScript, and modern frontend ecosystems. Strong track record of owning complex systems end-to-end, improving performance and reliability, and delivering high-quality user-facing products in distributed environments.

Experienced working across multiple layers of the stack—from backend business logic and database-driven templating systems to frontend architecture, performance optimization, and user experience refinement. Particularly strong in debugging, systems thinking, and translating ambiguous product goals into robust technical solutions.

Core Technical Skills

Languages: PHP, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks / Libraries: WordPress, WooCommerce, React, Next.js, Node.js, Express

Backend / Data: MySQL, REST APIs, Server-side Rendering, CMS/Template Systems

Performance: Core Web Vitals, Lighthouse, Query Optimization, Lazy Loading, Caching

Engineering Practices: Code Review, CI/CD, Modular Architecture, Debugging, Refactoring

Quality: Accessibility (WCAG/ARIA), Cross-browser Compatibility, Technical SEO

Professional Experience

Marketing Web Developer — Measured

Oct 2023 – Nov 2024

- Owned development and optimization of production web applications supporting customer acquisition and product marketing initiatives.
- Reduced page load time from 3.5s to 0.7s through profiling, render optimization, code splitting, and asset strategy improvements.
- Increased conversion rates by 25% through UX refinement, performance tuning, and iterative product enhancements.
- Improved SEO score from 78% to 98% via semantic architecture, structured data, and technical SEO implementation.
- Built reusable component systems and maintainable frontend architecture to accelerate shipping velocity.
- Collaborated cross-functionally with design, marketing, and product stakeholders to translate requirements into scalable implementations.

Software Developer — Gardens Alive!

Jan 2012 – Sept 2022

- Developed and maintained large-scale multi-brand production web platforms using PHP, Smarty, JavaScript, and MySQL.
- Built and debugged backend business logic, templating systems, dynamic rendering pipelines, and data-driven customer experiences.
- Led accessibility modernization initiative across 19 production websites, achieving 95+ Lighthouse accessibility scores platform-wide.
- Improved system maintainability and reliability through refactoring legacy code and modularizing shared platform components.
- Diagnosed and resolved complex production issues impacting conversion-critical user journeys and platform stability.
- Contributed to platform growth supporting approximately 3× revenue increase during tenure.

Selected Projects

Red Rock Taxes — Site Migration & Performance Optimization

- Led end-to-end migration planning and implementation including DNS transfer, infrastructure coordination, and SEO-safe redirect mapping.
- Preserved search rankings and traffic while ensuring zero downtime deployment.
- Improved platform performance and technical SEO through frontend/backend optimization.

Lakshmi Iron Company — Dynamic Product Platform

- Architected scalable dynamic category and product rendering system with reusable UI patterns and CMS-driven data integration.

Engineering Strengths

- Strong debugging and systems-thinking mindset; comfortable working across abstraction layers to identify root causes.
- Proven ability to ramp quickly in unfamiliar codebases, frameworks, and technical domains.
- Balance engineering quality with pragmatic shipping velocity and business priorities.
- Thrive in autonomous, distributed, async-friendly environments with strong ownership expectations.

Education

Bachelor's Degree — Computer Science / Engineering
