Summary

Machine Learning Engineer / Software Engineer with 13+ years of software engineering experience and hands-on experience building machine learning pipelines using Python, TensorFlow, and Scikit-learn. Strong background in debugging production systems, optimizing complex workflows, and writing maintainable code across real-world applications.

Experienced in data preprocessing, feature engineering, model training, evaluation, and experimentation across deep learning and traditional machine learning workflows. Comfortable navigating unfamiliar codebases, refactoring systems for correctness/performance, and collaborating across engineering and research-oriented environments.

Core Skills

Languages: Python, JavaScript, PHP

ML Frameworks: TensorFlow, Scikit-learn, NumPy, Pandas

ML Concepts: Supervised Learning, Classification, Feature Engineering, Model Evaluation, Hyperparameter Tuning

ML Workflows: Data Preprocessing, Training Pipelines, Evaluation Pipelines, Inference Workflows

Software Engineering: Debugging, Refactoring, Production Systems, Modular Architecture

Backend / APIs: Node.js, Express, REST APIs

Databases: MySQL, PostgreSQL

Tools: Git, Jupyter/Colab, Docker (Basic), Linux (Basic)

Machine Learning Projects

Deep Learning Practice Repository

GitHub Repository

- Built end-to-end deep learning workflows using TensorFlow for image and text classification tasks.
- Implemented CIFAR image classification pipelines including preprocessing, model training, evaluation, and inference.
- Developed NLP sentiment analysis and review classification models using TensorFlow/Keras.
- Experimented with model architectures, optimization strategies, and hyperparameter tuning.
- Structured reproducible notebook-based workflows for experimentation and evaluation.

Traditional ML Classification Repository

GitHub Repository

- Built machine learning classification pipelines using Scikit-learn on structured datasets.
- Performed exploratory data analysis, feature engineering, preprocessing, and model selection.
- Evaluated models using classification metrics and iterative validation techniques.
- Applied performance tuning and comparative benchmarking across multiple algorithms.

Professional Experience

Marketing Web Developer – Measured

Oct 2023 – Nov 2024

- Built and maintained production-grade applications with focus on performance, maintainability, and correctness.
- Reduced page load time from 3.5s to 0.7s through profiling, debugging, and system optimization.

- Collaborated across teams to implement scalable, modular code and improve engineering quality.

Software Developer – Kinerk Direct Marketing Solutions

Jan 2012 – Sept 2022

- Developed and maintained large-scale production systems across multiple high-traffic web platforms.
- Diagnosed and resolved complex production issues impacting business-critical workflows.
- Refactored legacy systems to improve maintainability, modularity, and reliability.
- Collaborated with cross-functional stakeholders to deliver scalable technical solutions.

Engineering Strengths

- Strong debugging and refactoring ability across unfamiliar and complex codebases.
- Experienced in writing clean, reusable, and production-quality code.
- Comfortable working in benchmark/evaluation-oriented environments with attention to detail.
- Proven ability to ramp quickly in new technical domains and systems.

Education

Bachelor's Degree – Computer Science / Engineering
