

YOGITA MITTAL

Full-Stack / Principal Software Engineer (Node.js, React)

Email: yogitamittal.tech@gmail.com | Phone: +91 8360492810

LinkedIn: linkedin.com/in/yogitamittaltech | GitHub: github.com/yogitamittal93 | Portfolio: tinyurl.com/YogiFolio

PROFILE SUMMARY

Principal-level Full-Stack Engineer with 12+ years of experience designing and scaling JavaScript-based systems using Node.js and React. Strong hands-on expertise in API architecture, middleware design, system-level problem solving, and performance optimization. Experienced in building secure, scalable services including custom request handling, throttling strategies, and production-grade integrations. Owns solutions end-to-end—from low-level coding and system design to delivery and optimization in remote, high-ownership environments.

CORE TECHNICAL SKILLS

Frontend: React (18+), Next.js (13+), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind

Backend: Node.js, REST API Design, Middleware Architecture, Python (FastAPI basics), PHP, Laravel

System Design: API scalability, rate limiting concepts, request lifecycle, authentication, performance tuning

Databases: PostgreSQL, MySQL

DevOps: Docker, AWS, GitHub Actions, CI/CD Pipelines

Other: SEO, ADA/WCAG, Performance Optimization, Supabase, Third-party API integrations

PROFESSIONAL EXPERIENCE

Marketing Developer – Measured (Remote, US) | Oct 2023 – Nov 2024

- Designed and optimized React/Next.js applications backed by Node.js APIs
- Improved API and frontend performance, reducing load time from 3.5s to 0.7s
- Built reusable components and backend integrations with a focus on scalability and reliability
- Collaborated cross-functionally while owning technical decisions end-to-end

Freelance Full-Stack Engineer (Remote) | Feb 2022 – Present

- Designed and implemented Node.js APIs for SaaS and eCommerce platforms
- Built backend logic with structured request handling, validation layers, and middleware patterns
- Deployed Dockerized services with PostgreSQL and CI/CD automation
- Delivered production-ready systems balancing frontend UX with backend robustness

Software Developer – Gardens Alive! (US) | Jul 2012 – Feb 2022

- Built and maintained large-scale web platforms with PHP/Laravel and MySQL
- Led backend integrations, API-driven workflows, and performance improvements (40% faster sites)
- Set coding standards, reviewed designs, and mentored developers on scalable implementations

SELECTED PROJECTS

- **Ideaboard Microservices App:** Node.js, Next.js, Docker, PostgreSQL — designed scalable APIs and service boundaries
- **Dynamic Category & Brand System:** Node-backed architecture with structured data mapping and request handling
- **Measured.com Platform:** System-level frontend and backend optimizations driving measurable growth

EDUCATION & CERTIFICATIONS

- Bachelor of Computer Applications – Sikkim Manipal University
- JavaScript Algorithms & Data Structures – FreeCodeCamp
- Python for Everybody – Coursera (University of Michigan)
- Git & GitHub for Developers – LinkedIn Learning

HIGHLIGHTS

- Strong system-thinking engineer with deep JavaScript and Node.js foundations
- Comfortable with DS, problem solving, and writing production-grade code under constraints
- Trusted to own architecture, code quality, and delivery in remote-first teams
