Summary

AI and Machine Learning enthusiast with 13+ years of software engineering experience across full-stack development, data-driven systems, and large-scale e-commerce platforms serving U.S. businesses. Strong background in Python, machine learning workflows, and data analysis combined with deep experience handling large commercial datasets (50k–500k+ records). Experienced in exploratory data analysis, feature engineering, model experimentation using Python ML libraries, and automation of data-heavy business processes. Known for building practical solutions that reduce manual work, improve operational efficiency, and enable scalable decision-making. Currently expanding expertise in Machine Learning, NLP, and AI systems through hands-on projects and applied training.

Core Skills

Machine Learning & Data: Python, Pandas, NumPy, Scikit-learn, Exploratory Data Analysis (EDA), Data Cleaning, Feature Engineering, Model Training, Random Forest, Classification & Regression

Data Processing & Analytics: Large dataset processing, Excel analytics, data validation, lookup functions, dataset transformation, business data analysis

Software Engineering: React, Next.js, JavaScript (ES6+), TypeScript, Node.js, REST APIs

Databases & Infrastructure: PostgreSQL, MySQL, Docker, AWS (S3), CI/CD workflows

Machine Learning & Data Projects

Titanic Survival Prediction – ML Project

- Performed exploratory data analysis and data cleaning on passenger datasets.
- Applied grouped median/mode strategies to handle missing values.
- Engineered predictive features and trained classification models.
- Implemented Random Forest and other models using Python ML libraries.
- Evaluated models using accuracy and classification metrics.

Professional Experience

Software Developer – Kinerk Direct Marketing Solutions (Gardens Alive Portfolio)

- Worked on large-scale e-commerce systems supporting major brands including Spring Hill Nursery.
- Processed and validated very large promotional and product datasets containing up to hundreds of thousands of records including pricing, promotional rules, and catalog updates.
- Managed complex product pagination structures across multiple micro-websites supporting large seasonal catalogs and promotional campaigns.
- Built automation scripts using Excel and Word workflows that reduced manual operational effort by ~95% for promotional dataset preparation and system import tasks.
- Used large spreadsheet datasets (50k–60k rows+) to validate pricing rules, promotions, and keycode systems used in marketing campaigns.
- Implemented advanced spreadsheet logic and lookup functions to verify dataset relationships and ensure accurate imports into e-commerce systems.

Marketing Web Developer – Measured

- Optimized marketing platforms through performance improvements and structured content architecture.
- Integrated analytics and data tracking tools to improve lead capture and data visibility.
- Improved site performance significantly by optimizing frontend performance and delivery.
- Worked closely with marketing and analytics teams to improve data collection and campaign insights.

Freelance & Independent Engineering Projects

- Built modern web applications and backend APIs using React, Next.js, Node.js and PostgreSQL.
- Designed scalable systems and reusable components for product catalog and category management.
- Implemented containerized deployments using Docker.

AI / Machine Learning Training

AI / Machine Learning Practical Training – Internage / A2IT

- Hands-on training in machine learning pipelines including preprocessing, model training, and evaluation.
- Practical work with Pandas, NumPy, and Scikit-learn for structured dataset experimentation.
- Expanding into NLP, LLM applications, and applied AI workflows.

Education

Bachelor's Degree – Computer Science / Engineering
